Branda Goncalves

LPTM (PhD student), Université de Cergy-Pontoise, 2 Rue Adolphe Chauivin, 95302, Pontoise Cedex, France +33(0) 641410397, branda.goncalves@outlook.fr

October, 2019-September 2022 : Ph.D Candidate in Applied Mathematics

Research interests :Stochastic Processes Applied to Populations, Markov Chains, Disasters Modelling

Branda GONCALVES and Thierry HUILLET (2019) Scaling features of two special Markov Chains involving total disasters, *Journal of Statistical Physics*.

Master Thesis (2019) Supervised by T HUILLET, E LOCHERBACH : On Markov Chain population processes involving partial or total catastrophes.

Master 1 Thesis (2018) Supervised by E LOCHERBACH :Cox-Ross-Rubinstein Model : Applications to European and American options.

Andreas Heinen

Professor THEMA, Université de Cergy-Pontoise, 33 bd du Port 95011 Cergy-Pontoise Cedex, France.

After a Ph.D. in time series econometrics at the University of California, at San Diego and 6 years on the faculty in the Statistics Department of Universidad Carlos III in Madrid, Andréas Heinen joined UCP in 2010. Early research on integer-valued time series and their use in financial econometrics (Journal of Empirical Finance, 2007; Computational Statistics and Data Analysis, 2008, 2010). Now mostly working on dependence models for financial time series and cross-sectional data using copulas. Worked on vine copulas for large-dimensional volatility models and developed a multivariate regime-switching copula model that captures swings in the dependence structure between financial time series (Journal of Financial Econometrics, 2009). Currently working on the properties of skew normal and skew t copulas, and on copula applications to

- the geographic dependence in regional house prices (Geographic Dependence and Diversification in House Price Returns: the Role of Leverage, with Mi Lim Kim, EHESS),
- the spatial correlation of mortgage defaults (Spatial Dependence in Subprime Mortgage Defaults, Journal of Real Estate Finance and Economics, with Kau, Keenan and Kim, 2019),
- the contagion in mortgage defaults (Contagion in Subprime Mortgage Defaults: A Composite Likelihood Copula Approach, 2019, with Keenan, Kim and Slawson),
- the systemic risk in the microfinance sector (Competition, Fast Growth and Commercialization: Systemic Credit Risk in Microcredit Markets: A Copula Approach, 2019, with Hamadi and Juste),

Modeling of climatic extremes and natural disasters (hurricanes, typhoons), along with their spatial correlations and their effect on human populations. Also questions about the possibility of insuring against such climatic extremes.

Rémy Garnier

Jean-Luc Prigent

Professor in Economics and Finance at University of Cergy-Pontoise, and member of ThEMA (UMR CNRS 8184), Department of Economics and Business and of Labex MMEDII (ANR11-LBX-0023-01).

Research Interests : Portfolio optimization; performance measurement; asset pricing and hedging; financial econometrics; risk management; decision theory; real options; corporate finance.

Scientific consultant for financial institutions. Author of 5 books and of about 80 published papers, as:

1) Hedging global environment risks: An option based portfolio insurance, *Automatica*, 44(6), 1519-1531, 2008. (with A. de Palma).

2) On the optimality of funding and hiring/firing according to stochastic demand: the role of growth and shutdown options. *Economic Modelling*, 40, 410-422, 2014. (with N. Letifi).

3) A dynamic autoregressive expectile for time-invariant portfolio protection strategies. *Journal of Economics Dynamics and Control*, 46, 1-29, 2014. (with B. Maillet and B. Hamidi).

4) Risk management of time varying floors for dynamic portfolio insurance. *European Journal of Operational Research*, 269(1), 363-381, 2018. (with Hachmi Ben Ameur).

5) On the optimality of path-dependent structured funds: The cost of standardization, *European Journal of Operational Research*, 277, 333-350, 2019. (with Philippe Bertrand).

Rolando Rebolledo

Mathematical Engineer by the Universidad de Chile “Doctorat d’État ès-Sciences” at the University Pierre et Marie Curie (Paris VI). Full Professor at the University Paris-Sud and at the Universidad Católica de Chile in Santiago from 1981 until 2016. Full Professor at the Universidad de Valparaíso. Founding member of the Mathematical Society of Chile and has presided over it frequently. Member of the Board of the Bernoulli Society; Société Mathématique de France; American Mathematical Society; European Mathematical Society. Development and Exchange Commission of the International Mathematical Union.

Research: Open System Dynamical Models through Stochastic Analysis in both classical and quantum versions. Main results on limit theorems for stochastic processes. Recently contributed to the Theory of Quantum Markov Semigroups and has since 2010 a fruitful collaboration with Pablo Marquet’s team. Scientific production includes 100 articles published in international journals and seven research books.

1. Sur les applications de la Théorie des Martingales à l’étude statistique d’une famille de processus ponctuels. Proc Col. Stat. Grenoble. LNM 636 (1978), 27-70.
